

The QS Starter Package from abat

Your project is not progressing as quickly as planned?

Various reasons cause your project to stall before or during the implementation phase:

- Contaminated sites could not be removed before the start of the project
- Quality from different service providers diverges in a complex process
- Guidelines are not adhered to during the project phase
- Impending delay leads to disgruntlement within the project team

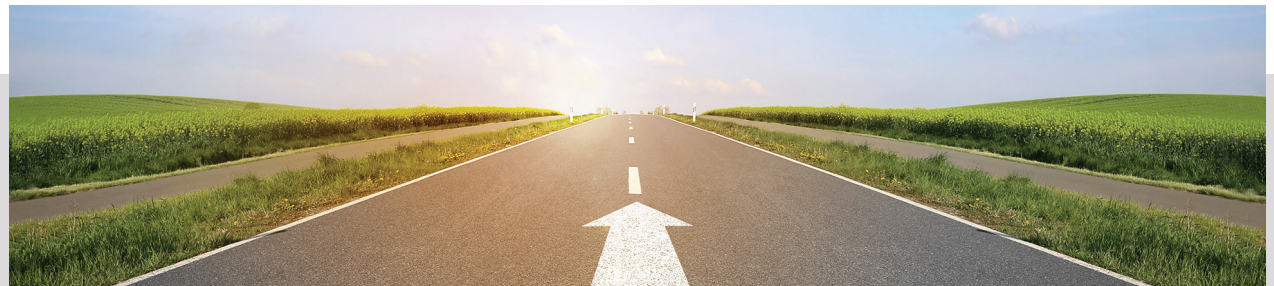

What does the abat QS Starter Package consist of?

- Configured test tools
 - ABAP Test Cockpit
 - Test variant according to development guidelines
- Quality gate set up
 - Integration in transport release
 - Release process
- Quality Report
 - Overview for development management
 - Project support through code reviews optionally possible

References and partners:

Successfully used by many OEMs.

abat is one of the leading SAP service providers for the automotive and manufacturing industries in Germany. The abat QS Starter Package bundles our knowledge of application development with ABAP, our experience and tools from numerous projects that we have supported with our quality assurance as well as from projects in SAP governance and the assessment of 3rd party solutions.

Here's how we do it:

- Workshop with the development management
- Setup of test variants and test runs for standard test tools
- Tool-supported „deep check“ of the existing custom code
- Evaluation of the results and listing of potential improvements

We deliver these results:

- Working lists with top 10 regarding security, robustness and performance
- Defined regular test runs
- Baseline for optimal overview of current developments
- Established quality gate and exemption process
