

Emission Essentials - learn concisely, report confidently, apply directly

How can you get started with CO2 reporting confidently?

Do you need to record emissions reliably and present them transparently, but are facing unclear standards, incomplete data, and complex distinctions?

This can make it hard to get started. It can also lead to mistakes and use a lot of resources. If you make small, quick changes, you might lose quality. If you use too many complex methods, you might waste time.

Emission Essentials tackles this issue head-on and gives you the know-how you need to get started with CO2 accounting in a technically sound, pragmatic, and practical way.

In our sustain service area, we help customers include ideas of sustainability into the systems and processes they already have. We want CSR managers to fight climate change, not mails and spreadsheets. The SMART-solution Emission Essentials offers a step-by-step guide to CO2 accounting. We teach you the relevant basics, create transparency on data and process issues, and accompany you through the first practical steps.

Your added value at a glance

- **Confident start:** Understand the basics of CCF (Corporate Carbon Footprint) and PCF (Product Carbon Footprint) accounting.
- **Methodological clarity:** Learn about the relevant standards, system boundaries, and requirements.
- **Transparency in data requirements:** Find out which material and energy data are really needed.
- **Practical application:** Implement your first CCF or PCF balances independently.
- **Technical sparring:** Receive feedback and support during implementation.

This is how we proceed:

- Initial discussion to clarify your goals and framework conditions
- Workshop to teach the basics and analyze your data situation
- Development of initial structures for CCF and PCF balances
- Accompanying sparring to review procedures, data, and results

We deliver these results:

- A clear structure for your CCF and PCF balances, tailored to your data situation and priorities
- A practical guide for the independent preparation of future CCF and PCF balances
- Derivation of concrete recommendations for the further development of your emissions accounting
