

# Understanding RPA and identifying potential with the RPA Starter Package

## What is RPA?

RPA (Robotic Process Automation) automates processes quickly, is easy to maintain and can be used without changing the affected systems. It is primarily used for repetitive, time-consuming and error-prone tasks.

With the integration of artificial intelligence, even complex, data-intensive processes, such as the processing of unstructured data (e.g. from documents), can be automated. In addition, modern AI agent workflows enable the mapping of dynamic and adaptive processes.

## What are the benefits of RPA?

- Efficiency and cost savings
- Process stability and error/risk minimization
- Quick development turnaround, fast execution, 24/7 scheduling
- Higher employee satisfaction

## The abat RPA Starter Package

- You will understand how RPA works, what it can be used for, and which are the most important RPA platform providers.
- Using a concrete demo use case on your company's systems, you can demonstrate the prove the effectiveness of RPA including AI functionalities and generate management buy-in.
- You will get a clear picture of the next steps for the introduction of RPA in your business-wide strategy and your day-to-day operation.

## References and partners:

abat is one of the leading SAP and Technological Innovation service providers for the automotive and manufacturing industries in Germany, Mexico, and USA. Implementing efficient process flows is our core business, and custom-fit customer solutions are our secret to success. **And this means using RPA in the right place and with the right tools.**

“ With abat’s RPA starter package, we jointly implemented a specific practical use case and quickly realized that RPA is a suitable tool for us..

Adrian Dexheimer, Head of Shared Services & Software Development at MANN & SCHRÖDER COSMETICS

## This is how we proceed:

- Introductory workshop to understand the basics of RPA (administration & IT recommended participants).
- Joint evaluation of selected processes for suitability and potential for RPA automation.
- Implementation of a Demo Use Case for a selected process.

## We deliver these results:

- An analysis of potential benefits of selected business processes with regard to the use of RPA.
- A Demo Use Case for an evaluated process to generate management buy-in and to make RPA known in the company
- A Roadmap for the next steps to implement RPA in your company.
